**Beam shapes, immersive beam shapes are one of the most wanted and requested outcomes of lighting by artists, lighting designers, and audiences anywhere:**

it is being done for decades in arenas with many luminaires, and we are now seeing the power of beam fixtures increase in order to allow such advanced beam shapes in stadiums or outdoor events.

**But what about smaller venues, the heart of our industry, where 90% of shows take place ?**

For venues with a capacity between 500 and 3000 people, most of the time such beam shapes cannot be achieved by combining dozens or hundreds of moving lights and the necessary trusses: either the venue is simply not large enough, the logistics are too limiting or the budget is too low.

**This is what the IVL Photon brings to the industry** →

**MINUIT<sup>®</sup>**
